

Module 6: S3 Website Hosting Assignment

Problem Statement: You work for XYZ Corporation. Their application requires a storage service that can store files and publicly share them if required. Implement S3 for the same.

Tasks To Be Performed:

1. Use the created bucket in the previous task to host static websites, upload an index.html file and error.html page.
2. Add a lifecycle rule for the bucket:
 - a. Transition from Standard to Standard-IA in 60 days
 - b. Expiration in 200 days

Solution:

Task1

1. Open S3 dashboard in AWS console.
2. Select the bucket created in Assignment 1 of S3
3. Also create 2 html file in laptop with name index.html and error.html
4. Upload the both files.

5. Go to the properties and enable Static website hosting.

6. Copy the URL and paste in the browser.

THIS IS INDEX.HTML PAGE

THIS IS ERROR.HTML PAGE

TASK2:

1. Go to the Management tab in the S3 bucket.

2. Create Lifecycle rule as per TASK 2

a. Give name to lifecycle

b. Apply to all object in the bucket

aws Services Search [Alt+S]

Amazon S3 > Buckets > s3-vaishnavi-bucket > Lifecycle configuration > Create lifecycle rule

Create lifecycle rule [Info](#)

Lifecycle rule configuration

Lifecycle rule name

Assignment 6 Rule

Up to 255 characters

Choose a rule scope

☐ Limit the scope of this rule using one or more filters

☒ Apply to all objects in the bucket

⚠ Apply to all objects in the bucket

If you want the rule to apply to specific objects, you must use a filter to identify those objects. Choose "Limit the scope of this rule using one or more filters". [Learn more](#)

☒ I acknowledge that this rule will apply to all objects in the bucket.

3. In the Lifecycle rule actions

a. Select the Move current version of objects between storage classes.

b. Select 60 days

☒ I acknowledge that this rule will apply to all objects in the bucket.

Lifecycle rule actions

Choose the actions you want this rule to perform. Per-request fees apply. [Learn more](#) or see [Amazon S3 pricing](#)

☒ Move current versions of objects between storage classes

☐ Move noncurrent versions of objects between storage classes

☐ Expire current versions of objects

☐ Permanently delete noncurrent versions of objects

☐ Delete expired object delete markers or incomplete multipart uploads

These actions are not supported when filtering by object tags or object size.

Transition current versions of objects between storage classes

Choose transitions to move current versions of objects between storage classes based on your use case scenario and performance access requirements. These transitions start from when the objects are created and are consecutively applied. [Learn more](#)

Choose storage class transitions

Standard-IA

Add transition

c. Select Expire current versions of objects for 200 days

The screenshot shows the AWS console interface for configuring a lifecycle rule. The main heading is "Expire current versions of objects". Below this, a text box indicates that for version-enabled buckets, Amazon S3 adds a delete marker and the current version is retained as a noncurrent version. For non-versioned buckets, the object is permanently removed. A link "Learn more" is provided. A dropdown menu labeled "Days after object creation" is set to "200". Below this is a section titled "Review transition and expiration actions". It is divided into two columns: "Current version actions" and "Noncurrent versions actions". Under "Current version actions", there are three entries: "Day 0" with "Objects uploaded", "Day 60" with "Objects move to Standard-IA", and "Day 200" with "Objects expire". Each entry is preceded by a downward arrow. The "Noncurrent versions actions" column is empty, showing "Day 0" with "No actions defined.". At the bottom right, there are "Cancel" and "Create rule" buttons.

Expire current versions of objects

For version-enabled buckets, Amazon S3 adds a delete marker and the current version of an object is retained as a noncurrent version. For non-versioned buckets, Amazon S3 permanently removes the object. [Learn more](#)

Day 0

No actions defined.

Cancel Create rule

4. Lifecycle Rule has been created for the entire bucket.

The screenshot shows the AWS console interface for the lifecycle configuration of a bucket. A green notification banner at the top states: "The lifecycle configuration was updated. Lifecycle rule 'Assignment 6 Rule' was successfully added. It may take some time for the configuration to be updated. Press the refresh button if changes to the rule are not displayed." Below the notification, the breadcrumb path is "Amazon S3 > Buckets > s3-vaishnavi-bucket > Lifecycle configuration". The main heading is "Lifecycle configuration" with an "info" link. A paragraph explains that lifecycle configurations are sets of rules that define actions that Amazon S3 applies to a group of objects. Below this is a section titled "Lifecycle rules (1)". It includes a search bar "Find lifecycle rules by name", a refresh button, and buttons for "View details", "Edit", "Delete", "Actions", and "Create lifecycle rule". A table lists the lifecycle rules. The table has columns: "Lifecycle rule name", "Status", "Scope", "Current version actions", "Noncurrent versions ...", "Expired object delete ...", and "Incomplete multipart...". The table contains one rule: "Assignment 6 Rule", which is "Enabled", applies to the "Entire bucket", and has actions for "Transition to Standard-IA, then" and "Expired object delete ...".

The lifecycle configuration was updated. Lifecycle rule "Assignment 6 Rule" was successfully added.
It may take some time for the configuration to be updated. Press the refresh button if changes to the rule are not displayed.

Amazon S3 > Buckets > s3-vaishnavi-bucket > Lifecycle configuration

Lifecycle configuration [info](#)

To manage your objects so that they are stored cost effectively throughout their lifecycle, configure their lifecycle. A lifecycle configuration is a set of rules that define actions that Amazon S3 applies to a group of objects. Lifecycle rules run once per day.

Lifecycle rules (1)

Use lifecycle rules to define actions you want Amazon S3 to take during an object's lifetime such as transitioning objects to another storage class, archiving them, or deleting them after a specified period of time. [Learn more](#)

Find lifecycle rules by name

Lifecycle rule name	Status	Scope	Current version actions	Noncurrent versions ...	Expired object delete ...	Incomplete multipart...
Assignment 6 Rule	Enabled	Entire bucket	Transition to Standard-IA, then	-	-	-
