

Module 3: CloudWatch Dashboard Assignment

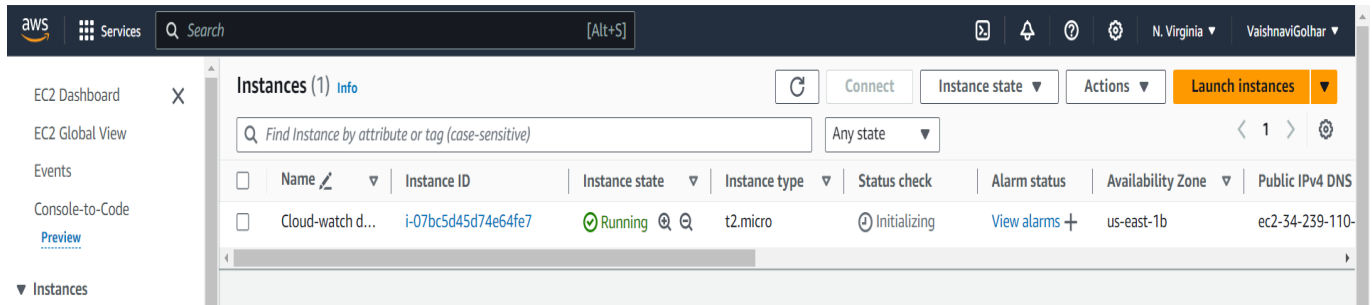

Problem Statement: You work for XYZ Corporation. To maintain the security of the AWS account and the resources you have been asked to implement a solution that can help easily recognize and monitor the different users. Also, you will be monitoring the machines created by these users for any errors or misconfigurations.

Tasks To Be Performed: 1. Create a dashboard which lets you check the CPU utilization and networking for a particular EC2 instance.

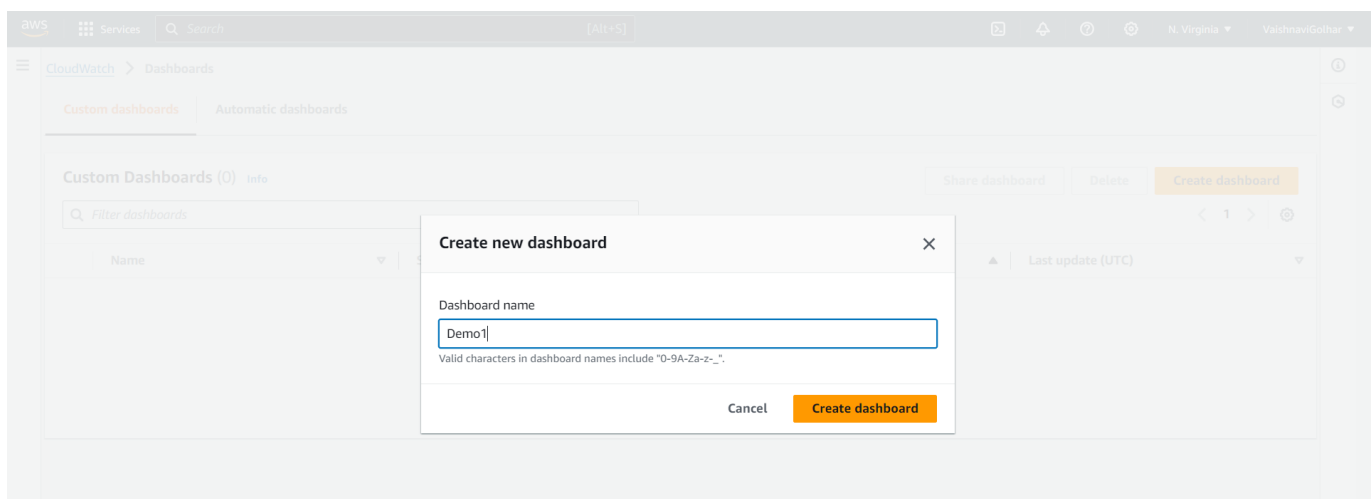

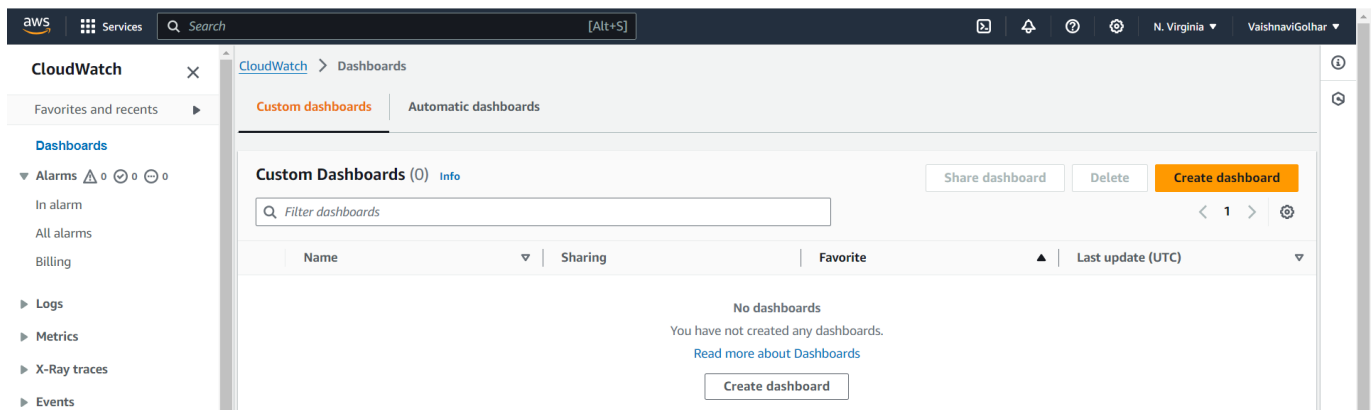

Solution:

- 1. Log in to AWS Console**
- 2. Create EC2 instance in which CPU utilization and networking need to monitor.**

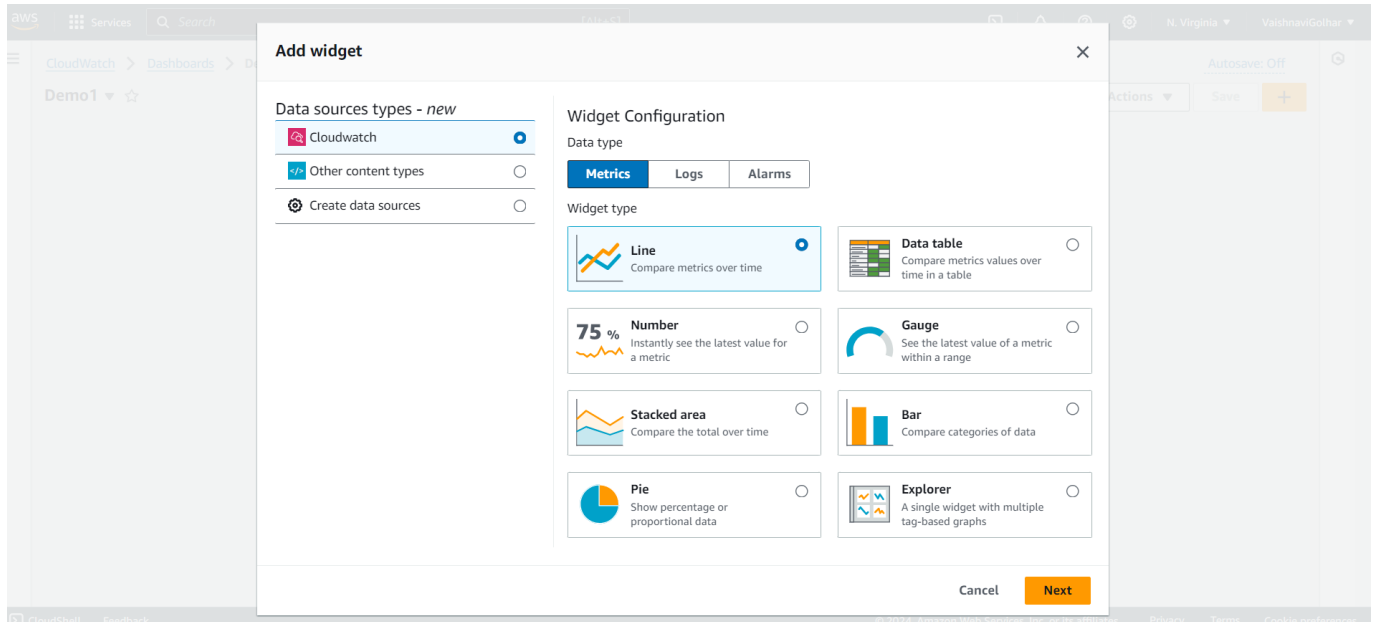

And also enable detailed monitoring

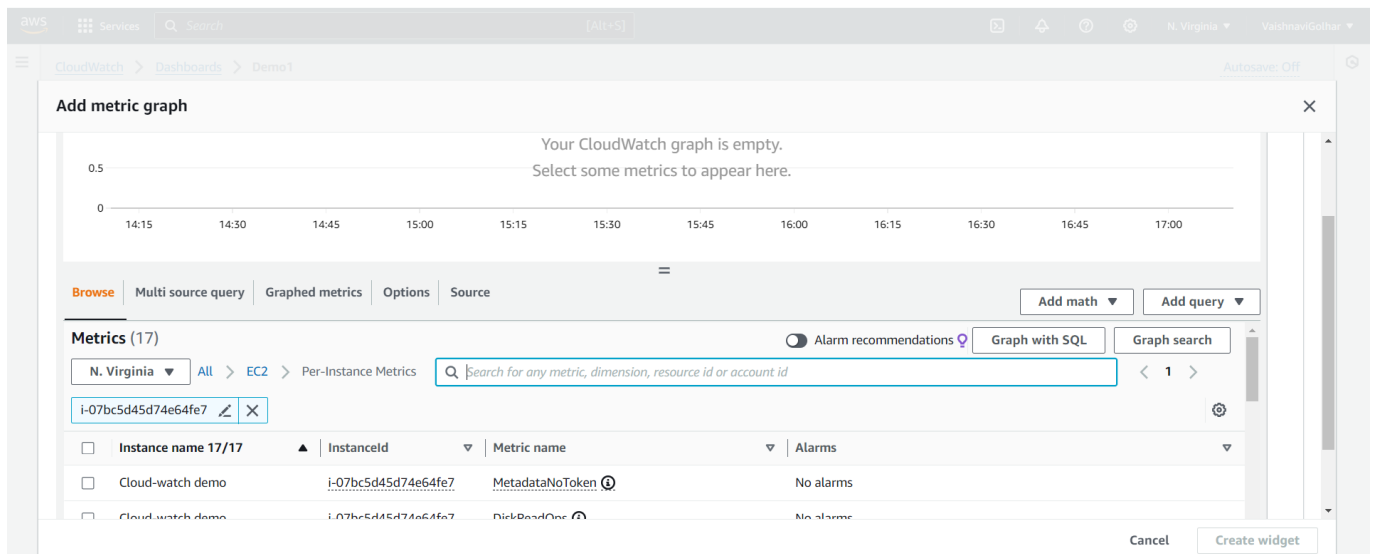

3. Navigate to the CloudWatch service. Click on Dashboard and Create dashboard and give the name

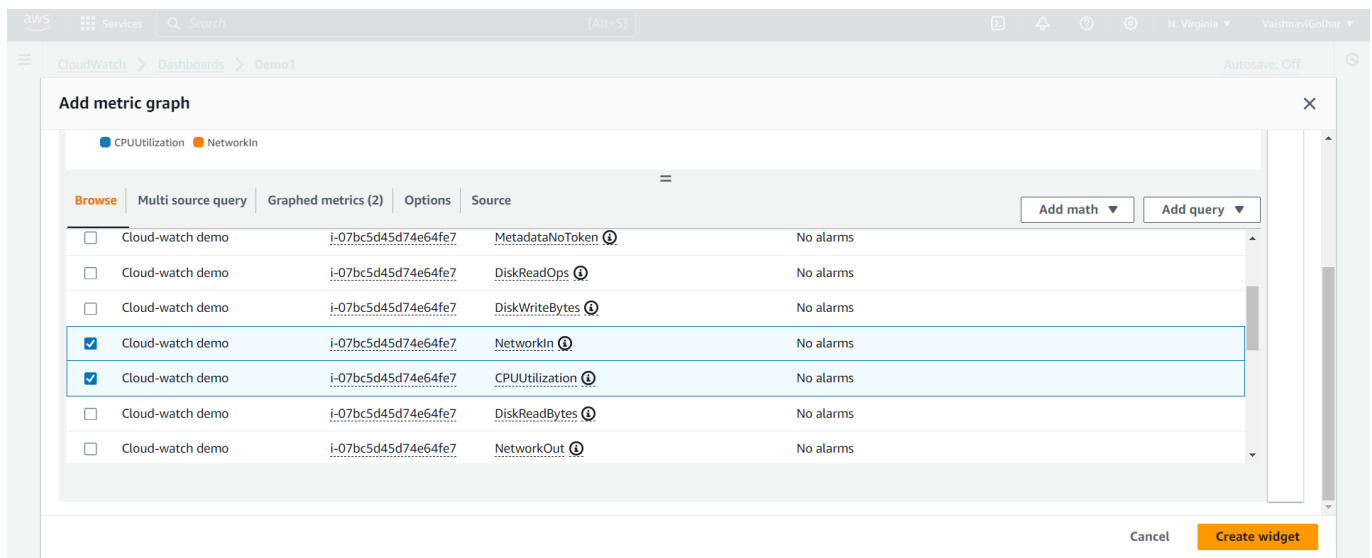

4. Add Widget

5. Under the "Metrics" section, select "EC2". Which need monitor by Instance ID

6. After choosing the EC2 instance, select the metrics you want to monitor. For CPU utilization, select "CPUUtilization". For networking, select metrics like "Network In" and "Net workout".

7. Now access this dashboard anytime from the CloudWatch console to monitor CPU utilization and networking for the selected EC2 instance.
